

Influenza continues to be detected at low levels in King County. No influenza-related deaths or facility-based outbreaks have been reported through week ending 10/18/2014. The proportion of emergency department visits attributable to ILI remains at baseline levels, and is comparable to levels seen in previous years. The University of Washington Virology laboratory has observed small numbers of influenza A and influenza B isolates, and has seen an increase in rhinovirus activity over the past month.

	Data for this week	Cumulative data this season since September 28, 2013
Laboratory-Confirmed Influenza Deaths	0	0
King County Outpatient Sentinel Influenza Providers		
Specimens Submitted	5	11
